FREQUENTLY ASKED QUESTIONS (FAQ)

- What are these tools for?
  - A set of web app data entry tools that ease coding and provide simple solutions for time consuming problems. These tools make it possible for a web application to behave much like a desktop applications created in Visual Studio.
- What programing languages do I need to know/learn to work with the tools?
  - C#, VB.Net or any other Visual Studio language.
- What do the tools do?
  - The tools convert your VB .Net or C# code into HTML, JavaScript, CSS, and Ajax, and then serve the code to the browser.
- Do I need to learn new Visual Studio commands/code to use these tools?
  - No.
- Which versions of Visual Studio do these tools work with?
  - Visual Studio 2012, Visual Studio 2013, Visual Studio 2015, Visual Studio 2017
- Do these tools require me to have a high level of programming knowledge?
  - No, only simple working knowledge of VB.Net or C# to set up the reading and storage of data. This knowledge in combination with the tools can create powerful web apps.
- Is there a support/update service for these tools? Is it free?
  - Yes and no.
  - There are several plans that adapt to different kinds of needs, ranging from Update Services to a Gold Standard Assistance Plan. For more details, please check our Prices section accessible from the main ContaNet.Tools page.
  - The support/update services are not free, based on the belief that a good customer service requires work. And good work requires an economic maintenance. Still, we will always put an effort to make our maintenance economically competitive with industry standards.
- Is there a trial version?
  - Yes, the Community edition is available as the trial version. It is accessible from the main ContaNet.Tools page under the section Free Trial.
- What are the limitations of the trial version?
  - The trial version contains full access to all the tools, but there will always be a proprietary advert along the bottom of the web application directed to the ContaNet.Tools page so more people can discover how we can help them change the internet with powerful interactive web applications.
- What is the compatibility on the different browsers?
  - The tools have been adapted to work and display on the browsers: Internet Explorer, Microsoft Edge, Google Chrome, Opera, Safari, and Firefox.
  - They also work on mobile devices, tablets and touch screens.
- What type of security in there in data processing of the tools?
  - All data handled by the tools is Encrypted using several propriety methods so that the transfer of data to and from the server is always secure. This includes the possibility of using encrypted cookies within the web apps.
